

since discovering XM Radio, i have completely changed my music listening habits. there is nothing even remotely close to their programming available to me over the airwaves. i have added a receiver to my house and both are used daily. in addition to the programming, the sound quality is equal or better than cd recording. please refrain from restricting XM or any other satilite radio or TV service from providing the most complete programing available. AM and FM radio's concerns are monitary only and their desire to control what we buy via commertials and listen to via their programming. it is clear that TV networks are even more paranoid about loosing comertial advertising. please represent the people and not the special interests.
